## LA STORIA

Dopo oltre un secolo di storica attività nel rispetto delle tradizioni agricole dell'epoca, è nel 1920 che l'impulso professionale di Giovanni Franchi, coadiuvato dal proprio figlio Pietro, Cavaliere del Lavoro al Merito Agricolo, avvia la produzione di sementi di alta selezione su moderna scala industriale nel nuovo insediamento di Bergamo. E con gli anni 30 inizierà per la Franchi Sementi l'espansione verso i mercati esteri.

Giovanni Franchi

Pietro Franchi

## THE HISTORY

After more than one century of storical and traditional agricultural activity, in 1920 the professional impulse of the great grandchild Giovanni Franchi assisted, by is son Pietro the Chevalier of the Labour for Agricultural Merit, starts the production of seeds of high grade on a modern industrial scale in Bergamo and in the thirties the expansion toward foreing markets started for Franchi Sementi.

### BIS DI LATTUGHE da taglio

Franchi Sementi S.p.A. - Via Novate, 48 - 20090  
Novate (MI) - Italia  
tel. 02.84022828 - Fax 02.84022844  
e-mail: [franchi@franchi-sementi.it](mailto:franchi@franchi-sementi.it)

**NORMATIVACE  
CATEGORIA STANDARD**

BIS DI LATTUGHE DA TAGLIO  
BORDA E ROSA PICCOLINA  
Lettuga Salata C.

L'immagine è solo a scopo illustrativo. Il prodotto è molto colorato e la sua coltivazione è molto semplice.

Varietà precoce.

Lattuga verde e rossa  
piccolina da taglio per  
ottenere insalate sempre  
fresche e colorate.

Rivegetano dopo il taglio.

La lattuga contiene buone  
quantità di vitamine A e C e  
per il suo elevato contenuto  
in acqua, apporta pochissime  
calorie.

#### LA SEMINA

Seminare in pieno campo a  
spaglio o a file, da febbraio a  
settembre.

#### LA COLTIVAZIONE

Dinamare se la coltura è troppo  
fitta, per evitare la formazione  
di muffe. Concimare ed  
annaffiare quanto basta.

#### LA RACCOLTA

Effettuare la raccolta delle  
foglie dal mese di aprile fino a  
novembre.

# Linea Professionale - Professional Line

1 kg F1 150/123  
4 kg K4 150/123

## Caratteristiche:

È un miscuglio di sementi per tappeti erbosi ottenuto da varietà professionali con la caratteristica di essere resistente alle diverse tipologie di terreno e condizioni climatiche. La buona velocità di sviluppo e l'ottima resistenza al calpestio, lo rendono un prato indicato per molteplici utilizzi.

## Characteristics:

Mix of grass seeds made up of professional varieties with properties such as resistance to various type of soil and climate conditions. Good growth speed and excellent resistant to tread make it a lawn suitable for multiple uses.

## Manutenzione:

Prima della semina è bene eliminare dal terreno le eventuali erbe infestanti presenti, in seguito preparare adeguatamente il terreno procedendo ad una lavorazione profonda e miscelando il terriccio utilizzando substrati di qualità. Si semina da inizio primavera fino ad autunno inoltrato. Concimare e annaffiare regolarmente durante il periodo vegetativo. Procedere ai tagli con prato asciutto ogni 10 giorni circa ed utilizzare tosaerba con lame ben affilate.

## Maintenance:

Before sowing, remove any weeds from the ground and then prepare properly the soil mixing with quality substrates. Sowing from the beginning of Spring till late Autumn. To fertilize and to water regularly during growing season. Proceed with cuts every 10 days (dry lawn) and to use a lawn mower with well sharp blades.

## Formato confezioni:

Scatola in cartone da 1 kg (cartone da 10 pezzi)  
Sacco in alluminio (termosaldato) da 4 kg

## Package format:

Carton box of 1 kg (carton includes 10 pieces)  
Alluminium sack (heat-sealed) of 4 kg

# Linea Professionale - Professional Line

1 kg F1 150/134  
4 kg K4 150/134

## Caratteristiche:

È un miscuglio di sementi per tappeti erbosi composto da varietà professionali di Loietto rizomatoso. La caratteristica principale di questo miscuglio è di essere molto tappezzante e di chiudere velocemente il prato, ricoprendolo di una fitta coltre di verde. Molto resistente alle diverse tipologie di terreno e condizioni climatiche, con ottima velocità di sviluppo e resistenza al calpestio, risulta un prato indicato per molteplici utilizzi.

## Manutenzione:

Prima della semina è bene eliminare dal terreno le eventuali erbe infestanti presenti, in seguito preparare adeguatamente il terreno procedendo ad una lavorazione profonda e miscelando il terriccio utilizzando substrati di qualità. Si semina da inizio primavera fino ad autunno inoltrato. Concimare e annaffiare regolarmente durante il periodo vegetativo. Procedere ai tagli con prato asciutto ogni 10 giorni circa ed utilizzare tosaerba con lame ben affilate.

## Formato confezioni:

Scatola in cartone da 1 kg (cartone da 10 pezzi)  
Sacco in alluminio (termosaldato) da 4 kg

## Characteristics:

Mix of grass seeds made up of professional varieties of Stoloniferous Ryegrass. The main feature of this mixture is to be very ground cover and close the lawn very quickly covering it with the thin green layer. Very good resistance to various type of soil and climate conditions. Excellent growth speed, resistant to treading, a lawn suitable for multiple uses.

## Maintenance:

Before sowing, remove any weeds from the ground and then prepare properly the soil mixing with quality substrates. Sowing from the beginning of Spring till late Autumn. To fertilize and to water regularly during growing season. Proceed with cuts every 10 days (dry lawn) and to use a lawn mower with well sharp blades.

### Caratteristiche:

Il prato "4 Seasons SOS" è un innovativo miscuglio adatto per tutte le stagioni. Particolarmente indicato per le semine nei periodi invernali grazie all'ottima capacità di germinazione e insediamento con temperature del terreno fino a 6°C. Ottimo anche come rigenerante per manti erbosi danneggiati, germinando entro un periodo sensibilmente inferiore rispetto ad un classico miscuglio rigenerante e con una sostanziale riduzione del "periodo di recupero" dopo la risemina.

### Vantaggi:

- ottima germinazione alle basse temperature
- veloce rinfoltimento anche nei mesi autunno/invernali

### Dose di semina:

- dai 30 ai 50 grammi di seme per m<sup>2</sup> in base alla temperatura del terreno (a minor temperatura deve corrispondere una maggiore quantità di seme)

"4 Seasons SOS" vi offre un tappeto erboso che rimane fitto e compatto per tutto l'anno.

### Characteristics:

"4 Season SOS" grass seeds is an innovative mixture suitable for all seasons. It's particularly indicated to be sown during winter season thanks to the excellent capacity of germination and settlement with soil temperature up to 6°C. Excellent as regenerating grass seeds for damaged lawn, germinating within significant period lower than a classic regenerating mixture and with substantial reduction of the "recovery period" after re-sowing.

### Advantages:

- excellent germination at low temperatures
- fast thickening even in the autumn / winter months

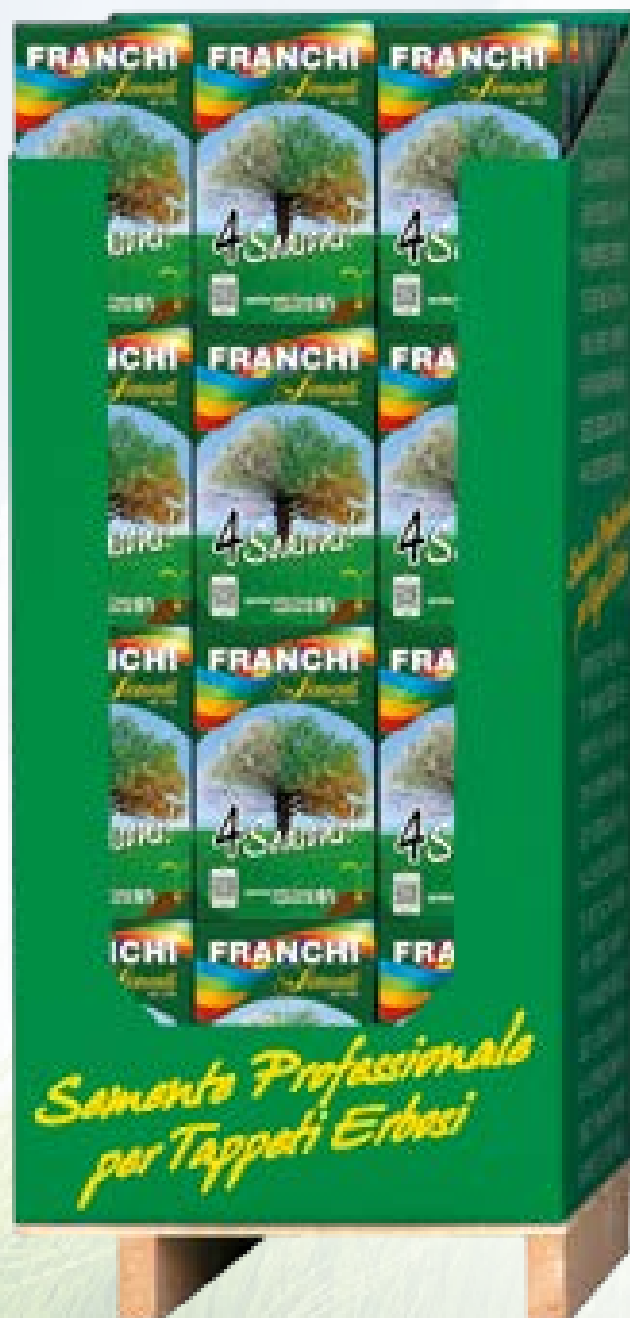

### Sowing rate:

- from 30 to 50 grams of seed per m<sup>2</sup> based on the soil temperature (at lower temperature a greater quantity of seed must correspond)

"4 Seasons SOS" offers You a lawn that remains thick and compact throughout the year.

LOLIUM Multiflorum	50%

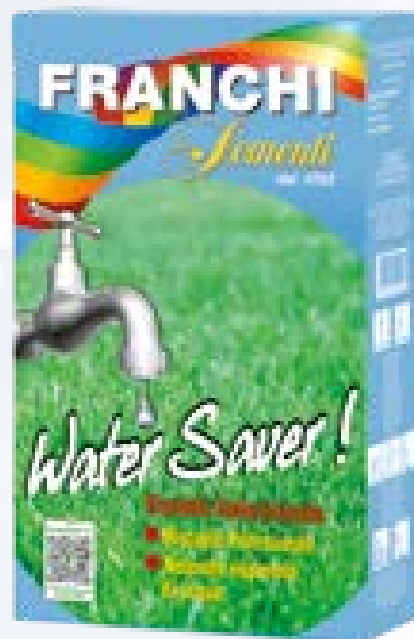

# Water Saver

## Prato "Water Saver" 1 kg Water Saver Grass seeds 1 kg

1 kg F1 150/135

### Caratteristiche:

Il prato "WATER SAVER" è un miscuglio speciale per tappeti erbosi caratterizzato dalla presenza di varietà di Festuca arundinacea appositamente selezionate per sviluppare un apparato radicale molto profondo, una struttura fogliare più fine ed un'ottima tolleranza alla siccità rispetto alle varietà tradizionali.

#### Vantaggi:

- maggiore resistenza alla siccità
- radicazione profonda
- ridotto consumo d'acqua

#### Dose di semina:

- Con 1 kg di seme si possono coprire circa 40 m<sup>2</sup> e il miscuglio "WATER SAVER" vi offre un tappeto erboso che rimane fitto e compatto per tutto l'anno.

### Characteristics:

Water Saver grass seeds is a special mixture for lawns characterized by presence of Festuca arundinacea varieties specially selected to develop a very deep root system, more fine leaf structure with excellent tolerance for drought compare with traditional varieties.

#### Advantages:

- greater resistance to drought
- deep rooting
- reduced water consumption
- 

#### Sowing rate:

- With 1 kg of seed you can cover about 40 m<sup>2</sup> and the mixture "WATER SAVER" offers You a lawn that remains thick and compact throughout the year

# Prato Stadio - Grass seeds Stadio

## Prato Stadio - Scatola da 1 / 2,5 / 5 / 12,5 kg Grass seeds Stadio - Box 1 / 2,5 / 5 / 12,5 kg

### Caratteristiche:

Il prato "STADIO" è un miscuglio professionale per tappeti erbosi particolarmente adatto all'inerbimento di prati per campi sportivi e/o sottoposti ad un forte calpestio. Indicato per la semina in giardini ornamentali vista l'intensa colorazione verde del suo manto, ma molto indicato anche per il giardino di casa.

### Vantaggi:

- rapida crescita ed infoltimento
- varietà professionali
- colorazione del verde molto intensa
- ottima resistenza all'usura

### Dose di semina:

Con 1 kg di seme si possono coprire circa 40 m<sup>2</sup> il miscuglio "STADIO" vi offre un tappeto erboso che rimane fitto e compatto per tutto l'anno.

### Composizione/Composition:

FESTUCA Arundinacea L. Var. 1	45%
FESTUCA Arundinacea L. Var. 2	45%
POA Pratensis L.	10%

### Characteristics:

"STADIO" is a professional mixture for lawns particularly suitable for grassing lawns for sports fields and / or subjected to heavy treading. Suitable for sowing in ornamental gardens given the intense green color, but very much also suitable for the home garden.

### Advantages:

- rapid growth and thickening
- professional varieties
- very intense green coloration
- excellent use resistance

### Sowing rate:

With 1 kg of seed you can cover about 40 m<sup>2</sup>. The "STADIO" mixture offers you a turf that remains dense and compact throughout the year.

# Prato A-mico - Grass seeds A-mico

## Prato A-mico - Scatola da 1 kg Grass seeds A-mico - Box 1 kg

### Caratteristiche:

Miscuglio di sementi per tappeti erbosi. Prato altamente professionale con micorrize, che favoriscono la crescita del prato. Esse inoltre aiutano ad assorbire più nutrienti grazie all'incremento della superficie radicale. Infine è resistente alle malattie e dispone di una maggiore difesa dell'apparato radicale.

### Manutenzione:

Lasciate che il vostro prato cresca bene prima di procedere al primo taglio e soprattutto lasciatelo infoltire. Utilizzate sempre attrezzi manuali o tosaerba con lame ben affilate, per evitare di strappare le radici, lasciando il taglio un po' alto. Con le successive tosature, regolare l'altezza in funzione delle proprie necessità.

### Dose di semina:

Seminare dall'inizio della primavera all'autunno inoltrato. Il seme si trova nelle giuste condizioni per potere germinare e svilupparsi nel modo migliore, avendo a disposizione da subito tutte le sostanze di cui necessita.

### Composizione/Composition:

FESTUCA Arundinacea L. Var. 1	40%
FESTUCA Arundinacea L. Var. 2	40%
LOLIUM Perenne L.	15%
POA Pratensis L.	5%

### Characteristics:

Mixture of seeds for turf. Highly professional lawn with mycorrhizae, which promote lawn growth. They also help absorb more nutrients thanks to the increase in root surface area. Finally, it is resistant to diseases and has a greater defense of the root system.

### Maintenance:

Let your lawn grow well before making the first cut and above all let it thicken. Always use hand tools or mowers with well-sharpened blades to avoid tearing up the roots, leaving the cut a little high. With subsequent clippings, adjust the height according to your needs.

### Sowing rate:

Sow from early spring to late autumn. The seed is in the right conditions to be able to germinate and develop in the best way, having all the substances it needs immediately available.

## AGROSTIS STOLONIFERA

### Caratteristiche / Characteristics:

È una specie molto pregiata indicata per la formazione di tappeti erbosi di notevole effetto estetico, soprattutto per campi da golf.

It is a very fine and highly indicated specie for the formation of lawns of considerable aesthetic effect, especially for golf courses.

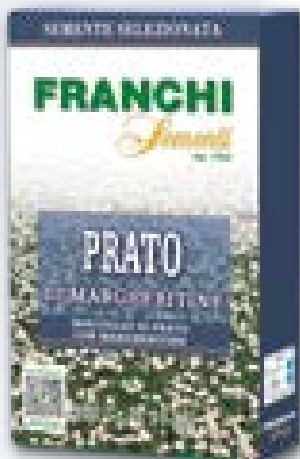

### Manutenzione / Maintenance:

Necessita di tagli settimanali utilizzando lame molto affilate. Effettuare annaffiature quotidiane. Necessita di abbondanti concimazioni.

Needs weekly cuts using very sharp blades. To water daily. It needs abundant fertilizations.

# Linea Tradizionale - Traditional Line + Grande formato - Big format

## PRATO MARGHERITINE

### Caratteristiche / Characteristics:

Si tratta di un miscuglio di sementi per tappeto erboso nella cui confezione viene aggiunta una busta termosaldada di semente selezionata di margheritina perenne dei prati. La confezione è da mescolare prima della semina. Le margheritine, sviluppandosi, daranno origine ad un manto bianco fiorito di notevole effetto.

It is a mixture of seeds for lawn in the package of which is added a heat-sealed bag of selected seed of perennial daisies. The composition is to be mixed before sowing. The daisies, developing, will give rise to a striking white flowered mantle.

### Manutenzione / Maintenance:

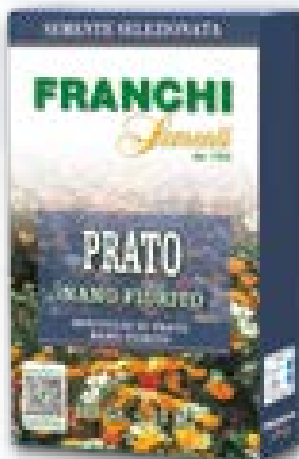

Si consiglia di tagliare il prato ogni 20/25 giorni o a fine fioritura. Innaffiare e concimare adeguatamente a seconda della stagione.

To cut the lawn every 20/25 days or at the end of flowering. Water and fertilize properly depending on the season.

confezione da 100 g  
pack of 100 g  
B1 185/2

## PRATO NANO FIORITO

### Caratteristiche / Characteristics:

Si tratta di un miscuglio di sementi per tappeto erboso nella cui confezione viene aggiunta una busta termosaldada di semente selezionata di fiori per prati. La confezione è da mescolare prima della semina. I fiori, sviluppandosi, daranno origine ad un manto fiorito multicolore di notevole effetto.

It is a mixture of seeds for lawns, in the package of which is added a heat-sealed bag of selected flower seed for lawns. The composition is to be mixed before sowing. The flowers, developing, will give rise to a multicolored flowering mantle of notable effect.

### Manutenzione / Maintenance:

Si consiglia di tagliare il prato a fine fioritura. Innaffiare e concimare adeguatamente a seconda della stagione.

To cut the lawn at the end of flowering. Water and fertilize properly depending on the season.

# Le Foraggere - Fodder line

## ERBA MEDICA MEDICAGO SATIVA

Pianta rustica che si adatta a quasi tutti i tipi di terreno eccetto quelli con marcata ristagno idrico. È sicuramente una specie utilizzata in tutto il mondo e di grande valore per le caratteristiche del foraggio che si ottiene, dall'elevato valore nutritivo. Si possono ottenere anche 5 sfalci all'anno con grande produzione di fieno. Necessita di abbondanti concimazioni a base di fosforo e potassio. Quantità di seme consigliata: 35/45 Kg./ha.

Rustic plant that adapts to almost all types of soil except those with water stagnation. It is certainly a species used all over the world and of great value due to the characteristics of the forage that is obtained, with a high nutritional value. You can also get 5 cuttings a year with great hay production. It needs abundant fertilizations based on phosphorus and potassium. Recommended amount of seed: 35/45 Kg./ha

25 kg

5 kg

500 g

## LOIETTO PERENNE

TETRAPLOIDE. Pianta rustica di media altezza indicata per climi temperati, freschi e umidi. Molto longeva è adatta alla composizione di molti miscugli per prati stabili. Buona resa in foraggio, necessita di concimazioni ed irrigazioni regolari. Quantità di seme consigliata: 50/70 Kg./ha.

Tetraploid. Rustic plant of medium height suitable for temperate, cool and humid climates. Very long-lived species, suitable for the composition of many mixtures for Stable lawns. Good forage yield, requires regular fertilization and irrigation. Recommended amount of seed: 50/70 Kg./ha.

25 kg

1 kg

## LOIETTO ITALICO

Pianta rustica che può raggiungere anche il metro di altezza. Si adatta a quasi tutti i tipi di terreno ma teme la siccità. Sviluppo rapido e rigoglioso che assicura grandi rese in foraggio. Può essere seminato sia alla fine dell'estate che all'inizio della primavera a seconda delle necessità. Quantità di seme consigliata: 50/70 Kg./ha.

Rustic plant that can even reach one meter in height. It adapts to almost all types of terrain but fears drought. Rapid and luxuriant growth that ensures great forage yields. It can be sown both at the end of the summer and at the beginning of the spring as needed.

Recommended amount of seed: 50/70 Kg./ha.
